

Rob Younce

Are You Really PCI Compliant?

PCI Compliance is constantly evolving and technologies continue to become more complex. The boundaries between your PCI Infrastructure and your existing infrastructure constantly cross allowing for the increase of your PCI Scope. If you do not meet the PCI standards for compliance and the security of your site gets compromised, you will be facing penalties and fines ranging from \$5,000 to \$500,000. The fines, however, are just the beginning of the overall damage caused by noncompliance. If your website or company are not PCI compliant, you run the risk of losing your merchant account, which means you won't be able to accept credit card payments at all.
