

DELAWARE STATE-WIDE INFORMATION TECHNOLOGY AND ARCHITECTURE STANDARDS

Standard ID:	SE-RA-001
Title:	Remote Access
Domain:	Security
Discipline:	Network Security
Revision Date:	12/11/2015
Revision no.:	5
Original date:	04/29/2005

I. Authority, Applicability and Purpose

- A. Authority:** Title 29, Chapter 90C of the Delaware Code provides broad statutory authority to the Department of Technology and Information to implement statewide and interagency technology solutions, policy, standards and guidelines for the State of Delaware's technology infrastructure. "Technology" means computing and telecommunications systems, their supporting infrastructure and interconnectivity used to acquire, transport, process, analyze, store, and disseminate information or data electronically. The term "technology" includes systems and equipment associated with e-government and Internet initiatives.
- B. Applicability:** Applies to all State of Delaware communications and computing resources. DTI is an Executive Branch Agency and has no authority over the customers in Legislative and Judicial Branches, as well as School Districts, and other Federal and Local Government entities that use these resources. However, all users, including these entities, must agree to abide by all policies, standards promulgated by DTI as a condition of funding, access, and continued use of these resources.
- C. Purpose:** This standard will address technology used to access the State's information assets from remote locations. The need exists to provide safe and private access to the State's resources. This standard will establish the acceptable methods of remote access.

II. Scope

- A. Audience:** This document is intended for Systems Administrators, Network Administrators, and end user support personnel. This document is not intended for use by non-IT personnel.
- B. Areas Covered:** This standard covers all access to the State's LAN (Local Area Network), or WAN (Wide Area Network) infrastructure from a remote location (remote from the asset you are accessing). This standard does not cover publicly accessible web pages or applications, nor does it cover File Transport, which is covered in standard "[Secure File Transport](#)". This standard does not cover State based WiFi (802.11x – Guest Net / Public Net) or PAN (personal area network e.g. Bluetooth) because those devices must be in close proximity to the router. They

These standards are adopted by the Department of Technology and Information (DTI), through the Technology and Architecture Standards Committee (TASC), and are applicable to all Information Technology use throughout the State of Delaware. Any questions or comments should be directed to dti_tasc@state.de.us.

DELAWARE STATE-WIDE INFORMATION TECHNOLOGY AND ARCHITECTURE STANDARDS

are not considered to be outside the State infrastructure, but part of it. This standard does not cover appliances like network or highway traffic control.

- C. **Platforms:** All data devices that access the State's infrastructure from a mobile or remote location are covered. This includes PCs, Laptops, Notebooks, Tablet, Smartphones, and Servers-

III. Process

- A. **Adoption:** These standards have been adopted by the Department of Technology and Information (DTI) through the Technology and Architecture Standards Committee (TASC) and are applicable to all Information Technology use throughout the State of Delaware.
- B. **Revision:** Technology is constantly evolving; therefore, the standards will need to be regularly reviewed. It is the intent of TASC to review each standard annually. TASC is open to suggestions and comments from knowledgeable individuals within the State, although we ask that they be channeled through your Information Resource Manager (IRM) group.
- C. **Contractors:** Contractors or other third parties are required to comply with these standards when proposing technology solutions to DTI or other State entities. Failure to do so could result in rejection by the Delaware Technology Investment Council. For further guidance, or to seek review of a component that is not rated below, contact TASC at dti_tasc@state.de.us.
- D. **Implementation responsibility:** DTI and/or the organization's technical staff will implement this standard during the course of normal business activities, including business case review, architectural review, project execution and the design, development, or support of systems.
- E. **Enforcement:** DTI will enforce this standard during the course of normal business activities, including business case and architectural review of proposed projects and during the design, development, or support of systems. This standard may also be enforced by others during the course of their normal business activities, including audits and design reviews.
- F. **Contact us:** Any questions or comments should be directed to dti_tasc@state.de.us.

IV. Definitions/Declarations

A. Definitions

1. **Remote Access** –The ability to log on to the State of Delaware network from a remote location. In corporations, people at branch offices, telecommuters, and people who are traveling may need access to the corporation's network. Home users get access to the Internet through remote access to an internet service provider ([ISP](#)).
2. **Remote Access Server** –The computer and associated software that is set up to handle users seeking access to the network remotely. Sometimes called a *communication server*, a remote access server usually includes or is associated with a [Firewall](#) server to ensure security and a [router](#) that can forward the remote access request to another part of the corporate network. A remote access server may include or work with a modem pool manager so that a small group of modems can be shared among a large number of

These standards are adopted by the Department of Technology and Information (DTI), through the Technology and Architecture Standards Committee (TASC), and are applicable to all Information Technology use throughout the State of Delaware. Any questions or comments should be directed to dti_tasc@state.de.us.

DELAWARE STATE-WIDE INFORMATION TECHNOLOGY AND ARCHITECTURE STANDARDS

intermittently present remote access users. A remote access server may also be used as part of a virtual private network (VPN).¹

3. **Terminal Services** – Allows remote computers to run applications on a server as though it is running locally. This is similar to the functionality provided by X on UNIX and Linux platforms. Keystrokes and mouse action information is sent from the client to the server over the network and visual display information is sent back to the client from the server.
4. **Remote Desktop** – Taking control of a target computer. This means, for example, that you can connect to your work computer from home and have access to all of your applications, files, and network resources as though you were in front of your computer at work.
5. **Remote Administration** – Performing Network or Systems Administrator tasks on a computer other than the one at which you are sitting.
6. **Remote Access / VPN** – (Virtual Private Network) Provides secure, encrypted method to enter a private network.

B. Declarations

1. When access is through a public terminal (library PC, Kiosk, etc.) password managers, or forms completion programs must not be utilized to remember either logon ID or password.

DELAWARE STATE-WIDE INFORMATION TECHNOLOGY AND ARCHITECTURE STANDARDS

V. Definition of Ratings

Individual components within a Standard will be rated in one of the following categories:

COMPONENT RATING	USAGE NOTES
STANDARD – DTI offers internal support and/or has arranged for external vendor support as well (where applicable). DTI believes the component is robust and can be expected to enjoy a useful life of 3+ years from the Effective Date.	These components can be used without explicit DTI approval for both <u>new projects</u> and <u>enhancement</u> of existing systems.
DECLINING – Deprecated - DTI considers the component to be a likely candidate to have support discontinued in the near future. A deprecated element is one becoming invalid or obsolete.	Via the State's waiver process, these components must be explicitly approved by DTI for <u>all projects</u> . They must not be used for <u>minor enhancement</u> and <u>system maintenance</u> without explicit DTI approval via the State's waiver process.
DISALLOWED – DTI declares the component to be unacceptable for use and will actively intervene to disallow its use when discovered.	No waiver requests for new solutions with this component rating will be considered.

Missing Components – No conclusions should be inferred if a specific remote access technology is not listed. Instead, contact TASC to obtain further information.

DELAWARE STATE-WIDE INFORMATION TECHNOLOGY AND ARCHITECTURE STANDARDS

VI. Component Assessments

	Component	Rating	Comments
1	<u>Types of Connection</u>		
	Wireless		
1a	3G/4G/4G LTE	Standard	Utilizing those carriers that are under State contract. See the Portable Wireless Network Access Device Policy
1b	CDPD	Declining	
	Wired		
1c	POTS (Dial Up)	Declining	
1d	DSL, Satellite, Cable, etc	Standard	See the VPN policy .
1e	Site-to-Site VPN	Standard	An example is a municipal police department to the State CJ domain. This is permitted with the Approval of DTI & the State organization's Information Security Officer. See the VPN policy .

<u>2</u>	<u>Function</u>		
2a	Remote Desktop	Standard	For remote access users, this function requires the use of SSL-VPN and it is restricted to authorized users only.
2b	E-mail & Calendar	Standard	Browser based access to Outlook Web Access (OWA), Blackberry and Smart Devices (active sync) are restricted to authorized users only.
2c	Secure Meeting from SSL-VPN	Standard	This solution is allowed when the session is initiated and monitored by a State employee

These standards are adopted by the Department of Technology and Information (DTI), through the Technology and Architecture Standards Committee (TASC), and are applicable to all Information Technology use throughout the State of Delaware. Any questions or comments should be directed to dti_tasc@state.de.us.
